Ansell

Comfortable anatomical glove with pre-curved fingers and winged thumb. Soft, two piece knitted liner which cushions the hand and absorbs perspiration. Exceptionally light and flexible permitting quicker and more certain handling. Class III product (protection from mortal risk).

Polyvinyl alcohol coating outperforms most other types of chemical resistant gloves. Unique PVA™ compound remains inert in the strongest solvents and virtually inert in aromatic and chlorinated solvents. Regularly lasts 10 to 15 times longer than any other coating. Virtually no absorption or extraction and no swelling or shrinkage to cause glove to degrade. PVA™ gloves are ideal in any area where strong organic solvents are being handled. Fully coated gauntlet style. Colour red.

NOTE: Do not use the gloves in water or water based solutions.

Ansell

A premium nitrile glove providing new standards of safety for high risk chemical handling. Each glove is individually air-pressure tested. Manufactured from a newly developed nitrile film which offers greater strength and superior chemical resistance, suitable for particularly hazardous chemical areas, e.g. chemical manufacture, transfer of aggressive chemicals and handling chemical mixtures. Other areas for use include oil refining, laboratory testing and the handling of pesticides, insecticides and plant protection chemicals. Sanitised®/Actifresh® with dot pattern reverse lozenge grip that actually strengthens the glove.

Flock lined with semi-gauntlet length for better forearm protection. Lozenge style. Colour red. Length 380mm, thickness 0.425mm.
