

# Sample storage

## Tubes, round bottom, polypropylene, blank and grid referenced, Thermo Scientific Matrix™

- With individual sample retrieval, avoid having to thaw an entire microplate to access only a few samples and speed up sample retrieval, preventing degradation
- 8 x 12 format allows 96 tubes to be filled at once with standard liquid handlers
- Tube racks have standard microplate footprint so are compatible with automated systems or microplate storage racks
- Unique, specially designed racks ensure that tubes remain secure during sampling, shipping or storing - polypropylene latch rack, polycarbonate snap rack
- Temperature range: -80°C to 120°C
- 100% leak tested
- Also available with barcoding, please see our website

## Tube racks, grid referenced and blank, automation compatible

Ideal for use with robots and other automated dispensing systems.

Tubes and rack are autoclavable at 121°C (2 bar), acc. DIN EN 285 (cover mat/strip, TPE, not autoclavable). Tubes, racks and lids can withstand temperatures as low as -80°C. The seal of the tubes is pressure tested and there is a stable connection between the mounting plate and the racks, making these stackable racks well suited for use with robots and automated systems.

Coded tubes (A1-H12) and rack sides are suitable for barcode labels.
